How to play

The game may be played by two to four players.

The object of the game is to get four numbers written in a row before your opponent/s. Choose a person to go first. Play then alternates between the players. On their turn, each player may choose any empty square to write a number in. The number must be the sum of the two numbers that appear at the start of the row and column that the square belongs to.

The winner is the first to have four numbers in a row either horizontally, vertically or diagonally. For young players omit the diagonal option. If either player writes the wrong answer on their turn, the answer gets crossed out and the square becomes "out of bounds."
